COMMUNITY FEEDBACK (Site visit June 16, 2011): Participants discussed a variety of reuse options including: senior and affordable housing, mixed use, social and health services, and adult education/training center. Attendees expressed a concern that due to the size of the building, it would be expensive to renovate/maintain; they indicated that it would likely take partnerships to redevelop/reuse the site. They also indicated that the grounds present a great opportunity to hold community/neighborhood events.

BUILDING/SITE ASSESSMENT: Building is in good condition. Its size and layout are readily adaptable for multi-family housing (33 +/- units), or a combination of housing + community services/office use. Classroom size converts well into a single bedroom apartment or combines well into two bedroom apartments. Classrooms could also be converted into multiperson office space, although there is a large amount of circulation space relative to office space. The building's exterior and interior design limit the visibility required for good retail use but could work as an office occupancy or business incubator. There is only partial air conditioning, which will limit many reuses under a short-term lease scenario. Any use other than office or education will typically require installation of a fire sprinkler system (a community center may not require this depending on overall square footage and location of exits). The large paved playground on the north side of the building offers opportunities for community use of the grounds (garden, farmer's market, open space, playground, etc.)

HISTORIC ASSESSMENT: Excellent example of a Progressive Era elementary school with a Modern Movement addition. The original plan and much of the original fabric remain intact. Windows have been replaced in the historic openings and finishes have been updated. The placement, design and materials of the addition complement the original construction. The building appears eligible for listing in the National Register of Historic Places.

MARKET ASSESSMENT: The Meservey facility, closed since 2009, is tucked into the Vineyard neighborhood and is not served directly by a primary arterial. While Meservey's zip code has been identified as one of the top five in need of performing schools, the site is within walking distance of both Carver Elementary and a charter school, while the number of children living in the area has dropped almost 40% since 1990. The area is aging; the percentage of seniors in the area is the highest of all the neighborhoods with a closed school. While the area's homeownership rates are higher than the district-wide average, they have dropped in recent decades. The area's vacancy rate, which has more than doubled since 2000 also serves as a constraint affecting the area.

LAND-USE AND ZONING ASSESSMENT: Land-use surrounding Meservey is primarily single-family residential. The current R-2.5 zoning classification supports a variety of potential reuses, including education, daycare (up to 20 children), agriculture, community center, and certain residential uses. Commercial reuses would require rezoning unless the building receives national or local historic designation. Certain commercial uses may then be allowable if the City issues a special use permit.
